MC833 - Tarefa 7

Erik de Godoy Perillo - RA: 135582

16 de junho de 2016

1. –

• int setsockopt(int sockfd, int level, int optname, const void *optval, socklen_t optlen)

Procedimento utilizado para configurar opções para o *socket* referido por sockopt. O nível de protocolo no qual a opção existe deve ser indicado por level. A opção então é especificada por optname; seu valor é colocado em optval e o tamanho do tipo respectivo ao valor passado é especificado em optlen.

- 2. Implementado.
- 3. O cliente permite a opção 'u' para usar protocolo UDP ou 't' para TCP. Na imagem abaixo pode-se verificar o funcionamento do servidor e clientes. À esquerda, está o servidor. Á direita, de cima pra baixo, estão o cliente novo usando UDP, o cliente novo usando TCP, o cliente da tarefa 3 usando TCP e o netcat usando UDP, respectivamente.

```
trab_7| ./server 13250
server PID is 17857, listening on port #13250

connected to IP 127.0.0.1, port #41078
connected to IP 127.0.0.1, port #41080

>> oi
[received fr
```

Foi comprovada a comunicação via rede através do *tcpdump* Pode-se ver que as portas da imagem estão de fato envolvidas, e todos usam o protocolo esperado:

```
$ sudo tcpdump -i lo
